with HID Mobile Access[®]

The World Leader in Access Control Technology

For decades, HID has helped millions of people easily access offices, classrooms, stores, hospitals and more. From entry-level smart card technologies to modern solutions like HID Mobile Access®, our mission is to find your organization the best access control solution for your needs.

Our product line includes:

- **Readers:** best-in class readers for access control and biometric applications
- **Credentials:** industry's widest selection of open, smart-card-based credentials and digital solutions
- **Controllers:** flexible, open-architecture controllers for security at the door and beyond

A woman with long brown hair, wearing a dark blue button-down shirt and a smartwatch, is holding a black smartphone in her right hand and a white disposable coffee cup in her left hand. She is standing outdoors with a blurred city skyline in the background. The right side of the image features a dark blue overlay with white text.

What is HID Mobile Access?

HID Mobile Access is the latest innovation in access control which enables your smartphone or wearable to be used to gain entry to secure areas, networks and services.

It allows users to securely unlock doors and other facilities using their mobile device, eliminating the need for traditional physical access cards, keys or passwords.

Leveraging Seos® as its underlying credential technology, HID Mobile Access increases convenience, boosts efficiency and maximizes security.

Further, HID Mobile Access can be incorporated into workplace or tenant experience applications using our extensive API/SDK integration tools.

Open More with HID Mobile Access

As the trend towards mobile technology continues to revolutionize the way we work and communicate, HID Mobile Access is at the forefront of this movement, offering a mobile-enabled solution that aligns with the needs and preferences of today's increasingly mobile workforce.

HID Mobile Access opens more benefits for businesses and large corporate enterprises by providing:

- **Enhanced security:** facilitate employees, contractors and visitors to access buildings, parking, networks and services with their smartphone or wearable. This also gives an added layer of security, as people rarely lose or share their device, due to its personal content and cost. In addition, for the user, they only need one device as multiple credentials can be stored.
- **Improved efficiency:** with a seamless digital lifecycle, including instant over-the-air credentialing, HID Mobile Access reduces the administrative burden of having to collect traditional cards.
- **Reduced cost:** going digital eliminates the need for physical cards or keys, and the associated burden of replacing lost items, all adding up to significant lifecycle cost savings.

- 
- **Integration with other systems:** an extensive API/SDK enables HID Mobile Access to be integrated into other services, such as workplace or tenant experience applications, as well as your existing security systems.
 - **Enhanced security:** using advanced encryption technology along with stringent privacy protocols, HID Mobile Access is internationally accredited with ISO/IEC27001, the world's best-known standard for information security management systems, which incorporates data protection and cyber resilience.
 - **Real-time monitoring and reporting:** enables you to see who's accessing facilities and when, whilst also providing valuable occupancy information.

HID Mobile Access also incorporates mobile Wallets* (utilizing the secure element built into the device) and supports the widest range of mobile devices in the market.

Just four components create your HID Mobile Access solution

1

The HID Origo Management Portal, used to manage all credentials through a secure, encrypted and international accredited cloud portal

2

The end user's smart device to house the credential and enable access to authorized facilities

3

HID mobile-enabled access readers such as our signature line Signo, to ensure future-proof technology

4

HID Mobile Access licenses (credentials) which are issued over-the-air to the end users' mobile device
